

- Flows remain high in our region, whilst slowly receding
- Dissolved Oxygen levels remain critically low, however; they are very slowly rising
- Aquatic vegetation within the KP Forest is patchy, with some regions showing an incredible response in both abundance and diversity

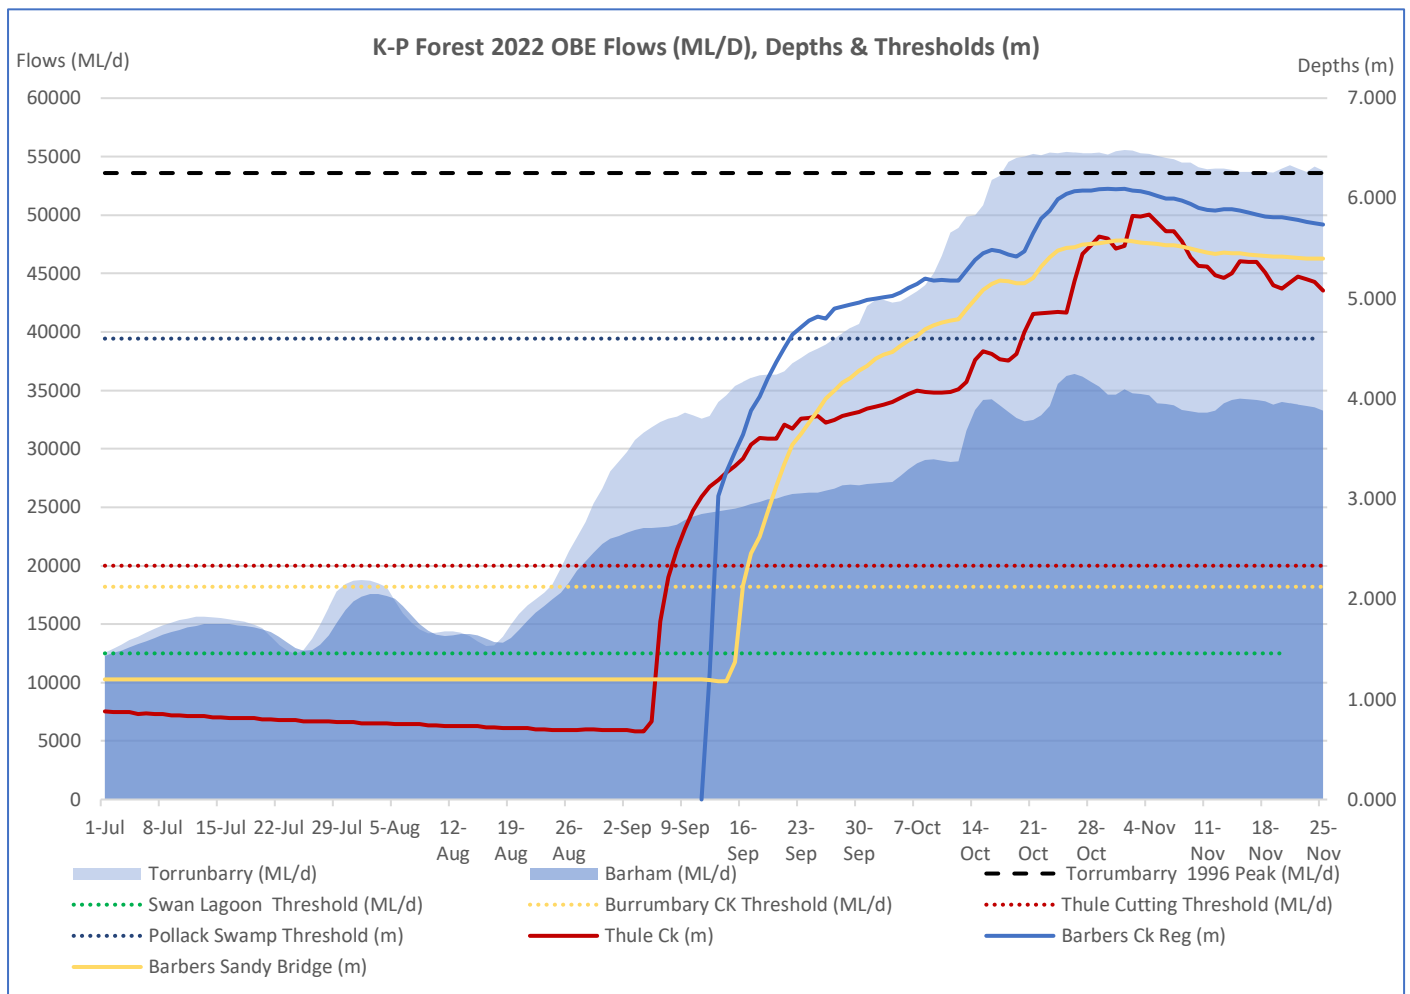

Figure 1: Hydrograph showing Murray River flows (ML/d), KPF inflow thresholds (ML/d), and exit flows (m)

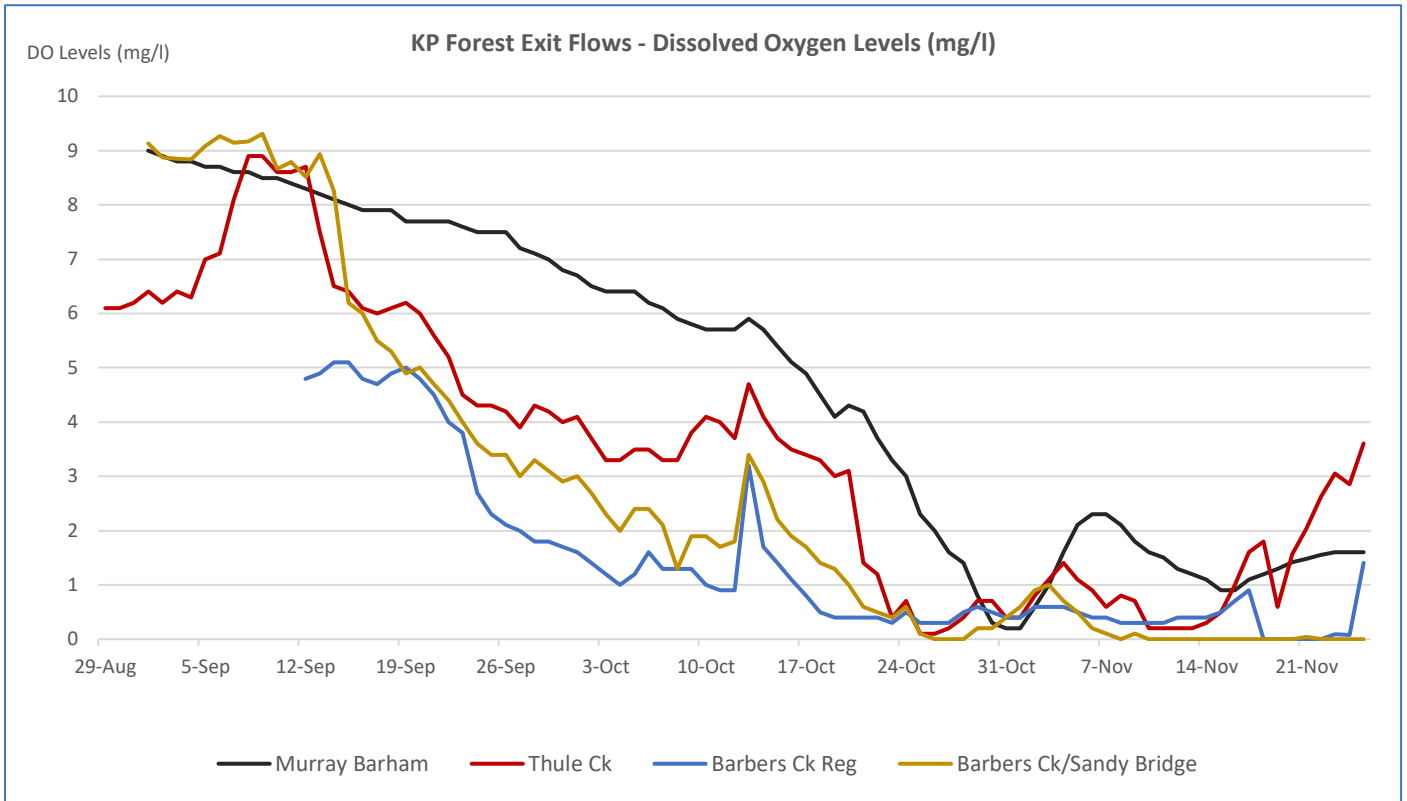

Figure 2: K-P Forest exit flow depths (m) & dissolved oxygen levels (mg/l)
