

- Flows remain high in our region, at, or close to peak levels
- Exit flows; the Thule Creek depth has risen whilst the Barbers Creek has dropped slightly
- DO levels remain critically low, although some marginal improvements have been seen over the last week
- Small bodied fish (both native and invasive) are currently breeding
- Bird nesting and breeding has started increasing this week at the Pollack Swamp
- Ewater refuge deliveries are continuing over the coming week
- Please note: there were no clear days for satellite imagery this week, fingers crossed for the next crossing on Sunday
